

Performance Fixed Frame Acoustically Transparent Screen Dimensions

Performance Fixed (PF) frame screens have been primarily designed for providing all the benefits of acoustically transparent (A.T.) front projection screens in a budget-conscious format.

The velour-covered screen frame is an angled bevel, not radiused like Reference screens.

The screen fabric attachment method uses small hooks attached to the frame and hooked to a metal bar sewn into the fabric. Acoustically transparent black backing is standard on all Performance Fixed screens.
